### Helps Reduce Patient Stress

Until now there has been no seamless way to move compromised or critically ill patients through the surgical environment without significant physical disruption to the patient. With its onboard vital signs monitor, dedicated anesthesia unit (with 2 E-tanks) and IV pole for fluids administration, the Olympic Surgical Support Gurney™ is the all-in-one solution that can move each patient seamlessly from prep to surgery, from surgery to imaging and from imaging to recovery.

### Helps Prevent Staff Injuries

The awkward transport of critically ill or interoperative patients is one of the primary sources of workplace injuries. These transfers require quick action, involve awkward navigation through crowded or obstructed hallways and often require pushing additional wheeled carts for IV fluids and anesthesia. With everything you need integrated into a single gurney, the Olympic Surgical Support Gurney™ makes for calmer, smoother and quicker transports.

Moving patients between surgery and x-ray imaging is a particular pain point in many hospitals. The Surgical Support Gurney eliminates all lifting from this process, creating a seamless transfer platform for sliding the patient from one surface to the other. And challenging recoveries no longer require a technician to sit on the floor with the patient. The integrated post-surgical recovery bed allows staff to nestle up to the patient at a comfortable and safe height.

### Saves Valuable Surgery Time

The integration of so many tools onto one transport gurney saves valuable minutes throughout the day. With its on-board precision scale, you can get an accurate weight at the push of a button whenever you want it, eliminating the awkward process of trying to catch a weight on a compromised or non-ambulatory patient. And because patients now arrive in the surgical suite connected to a transferable vital signs monitor, there is far less patient setup time.

## Safer for the Patient and Caregiver

### A Fully Mobile Solution

The Olympic Surgical Support Gurney™ is designed to move easily anywhere in your hospital and to accommodate patients up to 200 lbs.

### Transfer Patients Without Lifting

With or without the hard top stretcher, the Surgical Support Gurney facilitates smooth transfers to and from the surgical table.

### Seamless Transfers to Imaging

The radiolucent hard top can be lifted up and slid onto the x-ray platform with no disruption in care.

### Patient Recovery From A Comfortable Seated Height

Now you can lower the patient to a comfortable height and proceed with continuous monitoring and oxygen support.

### 2 Foot Switches

For faster and convenient height adjustment, there are foot switches on both sides of the table.

### Pivoting Hard Top Stretcher Retention Clips

Hold the hard top firmly in place for transport. Twist out to release hard top.

### Integrated Scale

Large, easy to read. Swivel mounted. Can weigh active animals. Accuracy +/- 0.1 lb. Lifetime quality.

### Your Choice of Ancillary Equipment

Table accommodates Supera, Vetland and Versa Compact table-top model anesthesia units and most mid-size monitors.

### Integrated Power Strip

7 electric outlets for connecting all your accessories and equipment. Conveniently located at end of table near equipment shelf.

### Specifications

**Overall Dimensions** – Overall 27" x 60"

**Table Top Dimensions** – 23" x 53"

**Height range** – 12" to 40"

**Patient Lift capacity** – 200 lbs

**Casters** – Large 5", full swivel, locking

**Tie-down cleats** – 4 on each side of table

**Rechargeable Battery** – Up to 120 up and down cycles off a single charge

**Electrical** – 120V/60Hz

## Order From Your Distributor

### Models with Corian® Table Top

**Olympic Surgical Support Gurney™ - with Scale..... Model 51622**  
Includes Scale, Corian® Top, and mounting shelf. Includes IV pole and removable Olympic Hard Top Stretcher.
