

Olympic Surgical Support Gurney™

The New Standard of Care for Surgical Prep, Transport and Recovery

NEW PRODUCT!

Transports, Weighs and Monitors

Provides Anesthetic and Oxygen Support

Carries Deployable Radiolucent Stretcher for Imaging

Transforms Into Post-Surgical Recovery Bed

Helps Reduce Patient Stress

Until now there has been no seamless way to move compromised or critically ill patients through the surgical environment without significant physical disruption to the patient. With its included IV Pole and the ability to add an on-board vital signs monitor and dedicated anesthesia unit (with 2 E-tanks), the Olympic Surgical Support Gurney is the all-in-one solution that can move each patient seamlessly from prep to surgery, from surgery to imaging and from imaging to recovery.

Helps Prevent Staff Injuries

The awkward transport of critically ill or interoperative patients is one of the primary sources of workplace injuries. These transfers require quick action, involve awkward navigation through crowded or obstructed hallways and often require pushing additional wheeled carts for IV fluids and anesthesia. With everything you need integrated into a single gurney, the Surgical Support Gurney makes for calmer, smoother and quicker transports.

Moving patients between surgery and x-ray imaging is a particular pain point in many hospitals. The Surgical Support Gurney nearly eliminates all lifting from this process, creating a seamless transfer platform for sliding the patient from one surface to the other. And challenging recoveries no longer require a technician to sit on the floor with the patient. The integrated post-surgical recovery bed allows staff to nestle up to the patient at a comfortable and safe height.

Saves Valuable Surgery Time

The integration of so many tools onto one transport gurney saves valuable minutes throughout the day. With its integrated precision scale, you can get an accurate weight at the push of a button whenever you want it, eliminating the awkward process of trying to catch a weight on a compromised or non-ambulatory patient. And because patients now arrive in the surgical suite connected to a transferable vital signs monitor, there is far less patient setup time.

All Olympic Equipment is manufactured in the USA and is backed by our full 3-year warranty

Safer for the Patient and Caregiver

A Fully Mobile Solution

The Olympic Surgical Support Gurney is designed to move easily anywhere in your hospital and to accommodate patients up to 200 lbs.

Transfer Patients Without Lifting

With or without the hard top stretcher, the Surgical Support Gurney facilitates smooth transfers to and from the surgical table.

Seamless Transfers to Imaging

The radiolucent hard top can be lifted up and slid onto the x-ray platform with no disruption in care.

Patient Recovery From A Comfortable Seated Height

Now you can lower the patient to a comfortable height and proceed with continuous monitoring and oxygen support.

Your Choice of Ancillary Equipment

Table accommodates Supera, Vetland and Versa Compact tabletop model anesthesia units and most mid-size monitors.

Integrated Scale (Optional)

Large, easy to read. Swivel mounted. Can weigh active animals. Accuracy ± 0.1 lb. Lifetime quality.

Hard Top Stretcher Retention Posts

Insert to hold the hard top firmly in place for transport. Twist out to release hard top.

2 Foot Switches

For faster and convenient height adjustment, there are two foot switches, one on each side of the table.

Integrated Power Strip

7 electric outlets for connecting all your accessories and equipment. Conveniently located at end of table near equipment shelf.

Corian® non-slip surface

Table top surface is lifetime Corian® from DuPont, the ideal surface for modern hospitals. Feels warmer than stainless steel, is non-skid so your patients remain calm, wipes clean with disinfectants and features a no-drip edge. Choose from 4 standard colors/patterns.
